Project Development Phase

Model Performance Test

Date	8 April 2026
Team ID	SWTID-2026-2921
Project Name	Smart library request eork flow
Maximum Marks	4 marks

Model Performance Testing:

Performance testing for a smart library request workflow ensures that IoT/RFID-based book retrieval, check-in/out, and shelving systems operate efficiently under load, aiming for minimal latency (<0.6s), high accuracy (near 100% reader success), and optimal user experience. Key testing includes validating RFID, ML-based occupancy, and API request handling.
